

Media Release

19 October 2022

Chant West philosophy: to ensure we capture an accurate picture of the market in any given month, we publish our monthly performance data once we've received responses from at least 80% of our growth fund universe.

Super funds well positioned to ride out volatile markets

Super funds had a disappointing September with the median growth fund (61 to 80% in growth assets) down 3.1%, mainly on the back of falls in domestic and global share markets. However, share markets have staged a recovery in the past couple of weeks, and we estimate that the median growth fund is up a healthy 2.1% in October so far. Looking at the three-and-a-half months of the financial year to date, the median growth fund is in the black with a return of 1.5%.

Chant West Senior Investment Research Manager, Mano Mohankumar, says that both share and bond markets were down in September as the US Federal Reserve and other central banks reiterated their commitment to controlling inflation, with monetary tightening quashing hopes of any interest rate cuts in the near future. "Markets got over-optimistic and were sold off when it became clear that central banks were prioritising inflation control at the expense of economic growth. We're now in a period of heightened volatility, with markets reacting sharply to every indicator that might point to the size and timing of the next interest rate move.

"Super funds are well-diversified, but listed shares are still the main drivers of performance and that accounted for the negative return in September. Both Australian and international share markets fell sharply, down 6.3% and 8.4%, respectively. However, the Australian dollar also fell sharply against the US dollar, as it usually does during periods of share market weakness, reducing the international shares loss to 3.2% in unhedged terms. With bond yields rising over the month those markets were also down, with Australian and international bonds retreating 1.4% and 3.5%, respectively.

"Most major super funds diversify their portfolios far beyond these traditional listed assets, with meaningful allocations to assets such as unlisted property, unlisted infrastructure and private equity which help cushion the blow when listed markets fall, which is what we saw in September. However, with 55% still allocated to listed share markets, growth funds are able to capture a meaningful proportion of the upside when those markets perform strongly, and that's what we've seen so far in October. This diversification helps funds ride out market volatility, which results in a smoother ride for their members."

Table 1 compares the median performance to the end of September 2022 for each of the traditional diversified risk categories in Chant West's Multi-Manager Survey, ranging from All Growth to Conservative. All risk categories have generally met their typical long-term return objectives, which range from CPI + 1.75% for Conservative funds to CPI + 4.25% for All Growth.

Table 1: Traditional Diversified Fund Performance (Results to 30 September 2022)

Risk Category	Growth Assets (%)	1 Mth (%)	3 Mths (%)	FYTD (%)	1 Yr (%)	3 Yrs (% pa)	5 Yrs (% pa)	7 Yrs (% pa)	10 Yrs (% pa)	15 Yrs (% pa)
All Growth	96 – 100	-4.7	-1.0	-1.0	-9.2	4.1	6.8	7.9	9.3	5.3
High Growth	81 – 95	-3.7	-0.6	-0.6	-7.1	4.3	6.5	7.4	8.8	5.5
Growth	61 – 80	-3.1	-0.6	-0.6	-5.7	3.7	5.5	6.4	7.6	5.1
Balanced	41 – 60	-2.4	-0.5	-0.5	-4.6	2.4	4.4	5.0	6.1	4.8
Conservative	21 – 40	-1.5	-0.4	-0.4	-3.7	1.4	3.1	3.8	4.6	4.3

Lifecycle products behaving as expected

Mohankumar says that while the Growth category is still where most people have their super invested, a meaningful number are now in so-called 'lifecycle' products. "Most retail funds have adopted a lifecycle design for their MySuper defaults where members are allocated to an age-based option that's progressively de-risked as that cohort gets older," he says.

"It's difficult to make direct comparisons of the performance of these age-based options with the traditional options that are based on a single risk category, and for that reason we report them separately. Table 2 shows the median performance for each of the retail age cohorts, together with their current median allocation to growth assets. For comparison purposes, it also includes a row for traditional MySuper Growth options – nearly all of which are not-for-profit funds. Care should be taken when comparing the performance of the retail lifecycle cohorts with the median MySuper Growth option, however, as they're managed differently so their level of risk varies over time."

Table 2: Median Retail MySuper Lifecycle Cohort Performance (Results to 30 September 2022)

	Median Growth Assets	1 Mth (%)	3 Mths (%)	FYTD (%)	1 Yr (%)	3 Yrs (% pa)	5 Yrs (% pa)	7 Yrs (% pa)	Since Jan 2014 (% pa)
1990s	90	-4.8	-1.0	-1.0	-8.7	3.0	5.7	6.5	6.3
1980s	90	-4.8	-1.1	-1.1	-8.9	3.0	5.6	6.5	6.4
1970s	90	-4.9	-1.1	-1.1	-8.9	2.8	5.5	6.4	6.3
1960s	76	-4.2	-1.2	-1.2	-8.3	1.8	4.4	5.3	5.4
1950s	53	-3.4	-1.2	-1.2	-7.8	0.8	3.5	3.4	3.8
1940s	46	-3.3	-1.1	-1.1	-7.8	0.6	3.0	3.3	3.6
MySuper Growth	71	-3.1	-0.5	-0.5	-5.6	3.8	5.5	6.4	6.5

Despite the falls in global share markets so far in 2022, options that have higher allocations to growth assets have done better over most periods shown. Younger members of retail lifecycle products – those born in the 1970s, 1980s and 1990s – have held their own against the MySuper Growth median over the five-year period and longer. However, they've done so by taking on significantly more share market risk. On average, these younger cohorts have at least 20% more invested in listed shares and listed real assets than the typical MySuper Growth option.

The 1960s cohort has generally underperformed the median MySuper Growth option. This is partly due to a lower allocation to growth assets up until about two years ago, when lifecycle product providers revised their glide paths to delay the de-risking process until older ages. Another reason for this underperformance is a lower allocation to unlisted assets, which have performed well, and a higher allocation to traditional defensive asset sectors, such as bonds and cash, which have been the weakest performing sectors since the introduction of MySuper.

The oldest cohorts (those born in the 1950s or earlier) are relatively less exposed to growth assets, so you would expect them to underperform the MySuper Growth median over longer periods. Capital preservation is more important at those ages, so while they miss out on the full benefit in rising markets, older members in retail lifecycle options are generally better protected in the event of market weakness.

Long-term performance remains above target

MySuper products have only been operating for eight years, so when considering performance it's important to remember that super is a much longer-term proposition. Since the introduction of compulsory super in 1992, the median growth fund has returned 7.7% p.a. The annual CPI increase over the same period is 2.6%, giving a real return of 5.1% p.a. – well above the typical 3.5% target. Even looking at the past 20 years, which includes four major share market downturns – the 'tech wreck' in 2002-2003, the GFC in 2007-2009, COVID-19 in 2020 and the 2022 calendar year driven by high inflation and rising interest rates to combat it – super funds have returned 7.1% p.a., which is still comfortably ahead of the typical objective.

The chart below shows that, for the majority of the time, the median growth fund has exceeded its return objective over rolling 10-year periods, which is a commonly used timeframe consistent with the long-term focus of super. The exceptions are two periods between mid-2008 and late-2017, when it fell behind. This is because of the devastating impact of the 16-month GFC period (end-October 2007 to end-February 2009) during which growth funds lost about 26% on average.

Growth Funds – Rolling 10 Year Performance (Returns – % pa)

Note: The CPI figure for the September quarter 2022 is an estimate.
